Bastián Carrizo Valenzuela

Santiago, Chile | bastiancarrizo@icloud.com | +56 9 5388 6782 | linkedin.com/in/bastiancarriz | github.com/crizoz

Computer Engineering senior at Universidad Andrés Bello, graduating in the first half of 2027. I work at a wellness startup where I build the product across mobile, backend and data, and where I also run the planning with the CTO and CEO. Second place at Anthropic's Claude Impact Lab (Chile, 2026). I use AI coding agents every day and review what they produce before it reaches users.

EXPERIENCE

Software Engineer · Makana (wellness startup)
Santiago, Chile | 2026 – present

- Build features end to end: Flutter and Dart on mobile, Ruby on Rails with PostgreSQL on the backend, on Google Cloud. I work on every surface of the product, the consumer app, the B2B side our client companies use, the marketing site and the internal tools.
- Work on the wearable integrations that bring sleep, recovery and workout data into the product, and on the training and nutrition modules that read from it.
- Own the product analytics pipeline on Supabase and PostgreSQL, from the events the app emits to the queries that answer whether a feature landed, and handle subscriptions and paywalls through RevenueCat on iOS and Android.
- Ran the English and Portuguese localization of the exercise catalog, roughly 9,000 rows into production with no downtime, and debug the live systems behind the bank sync integrations.
- Moved the product team onto a Kanban board with weekly goals and a card per deliverable, which roughly tripled what we ship in a week. I run the follow-up and plan the roadmap with the CTO and CEO.

Technical Lead and Frontend Engineer · Meridian, Claude Impact Lab (Anthropic)
Santiago, Chile | 2026

- Second place in the first AI financial inclusion hackathon in Latin America, organized by Anthropic. I designed the architecture of a multi-agent system over Chilean securities and banking regulation, and built the React interface on top of Claude Sonnet.

Co-manager and Developer · AI Bootcamp 360, Universidad Andrés Bello
Santiago, Chile | 2024 – 2025

- Built teaching tools on the OpenAI and Gemini APIs for a university AI program, and ran the AWS EC2 infrastructure and deployment pipeline behind them.

Founder and Full Stack Developer · Memoira
O'Higgins Region and Santiago, Chile | 2023 – present

Face recognition over large photo catalogs so people can find themselves in an event archive in seconds.

PROJECTS

- **Internship management platform, UNAB School of Engineering** (2025 – present). Commissioned by the faculty. I lead the team replacing the paper process for every engineering student.
- **CerézIA**, thesis project. IoT sensors and machine learning models that predict harvest conditions for the Chilean cherry export industry.
- **Vakita**. Fintech for automated shared payments, built on Chilean open banking (Fintoc) and local payment gateways.
- **Vitals and Fleet** (github.com/crizoz). Two macOS apps in Swift and SwiftUI, with menu bar and WidgetKit targets, that track usage limits and background coding agents on my own machine.

EDUCATION

B.Eng. in Computer Engineering, Universidad Andrés Bello, Santiago. 2020 – 2027, expected graduation in the first half of 2027. Bachelor's degree in Engineering awarded Cum Laude.

SKILLS

Languages: TypeScript, JavaScript, Dart, Python, Ruby, Swift, SQL. Reading Java and Kotlin.

Mobile: Flutter, SwiftUI, WidgetKit, App Store and Play Store releases, TestFlight.

Backend: Ruby on Rails, Node.js, FastAPI, REST APIs, background jobs, BullMQ.

Data: PostgreSQL, Supabase, TimescaleDB, MySQL, MongoDB, Prisma.

Cloud and tooling: AWS EC2, Google Cloud, Docker, Git, GitHub Actions, Vercel, Railway.

Frontend: React, Next.js, Astro, Vite, Tailwind CSS.

AI: Claude API, OpenAI and Gemini APIs, multi-agent architectures, RAG, Claude Code and Cursor in daily work.

ADDITIONAL

English B2, with previous work experience in the United States through Work & Travel. Native Spanish speaker. I would require visa sponsorship to work in the United States.
